

## KEY TO SPECIAL PERMIT ZONES

The concept and adoption of the Special Permit Zones is developed in the text of this report.

### THE SPECIAL PERMIT ZONES DO NOT INDICATE LIMITS OF FLOODING!

The principal reason for the establishment of the zones is to assure that development of any kind is not allowed to infringe on the area required for the passage of storm waters. Special clearance is required prior to any activity that would interfere with this flow. This special clearance could mean that an engineer or other qualified individual make an on-site inspection and indicate that no interference is proposed or specify the improvement required. This should remain a simple process especially for the minor drainages. Hydraulic computations may be required in the larger drainages.

It should be emphasized that this process is necessary for the protection of both the waterway and private and public improvements.
